Individual assignment 7-Wireframe1: Site Structure
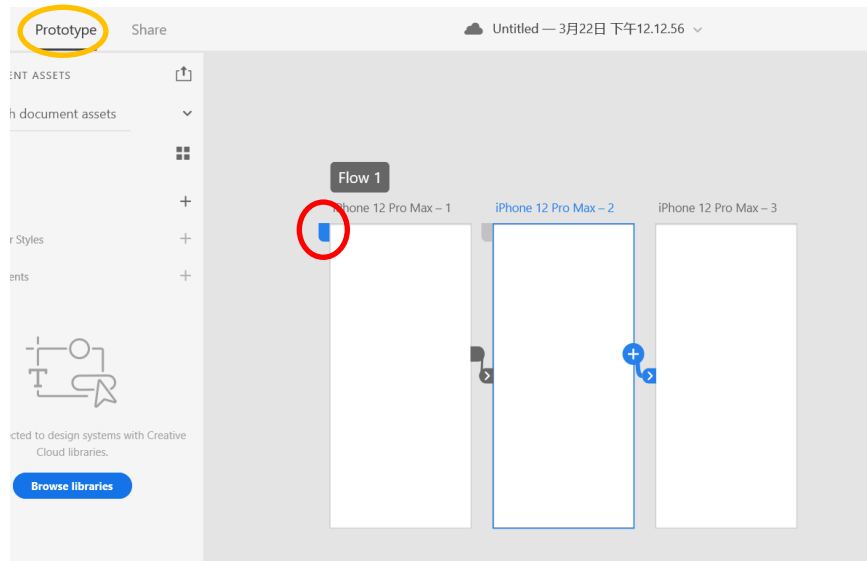

What you need to do for Wireframe 1

- Watch "What is a Wireframe?" https://www.youtube.com/watch?v=T0vt3nLZKks

- Read the article about wireframing https://www.usability.gov/how-to-and-tools/methods/wireframing.html

- Based on your paper sketches, create 6 wireframes with Adobe XD (3 for mobile and 3 for desktop). The wireframes do not have to be exactly the same as the paper sketches. You can make changes. Please improve the current website. Your design should be better than the original one.

- Make sure you include important components, such as logo, navigation bar, body content, footer, etc. Make them complete pages.

- Focus on the site structure for this version (Use placeholders. For example, use boxes for pictures. Do not use colors. We will add content for Wireframe2). This version is low fidelity, so do not focus on the details of the web content. The goal is to create the skeleton of your website, not the details. An example is attached for your reference.

- The items for the three pages you designed in the navigation bar should work. Otherwise, I will not be able to navigate between pages. Check individual assignment 2 if you forgot how to navigate between pages.
    - Your navigation bar should NOT only include three buttons for the three pages you work on. You need add buttons in your navigation bar for other important pages, but you do not need to create those pages. For example, if I want to work on the pages of "home", "academics", "student life" of it.ilstu.edu, I still need to include buttons for important pages such as "Faculty & Staff", "Alumni" in my navigation bar. Those buttons are fake ones, clicking on them won't take me anywhere.
    - Here is a tutorial about how to navigate between pages. https://helpx.adobe.com/xd/help/create-prototypes.html
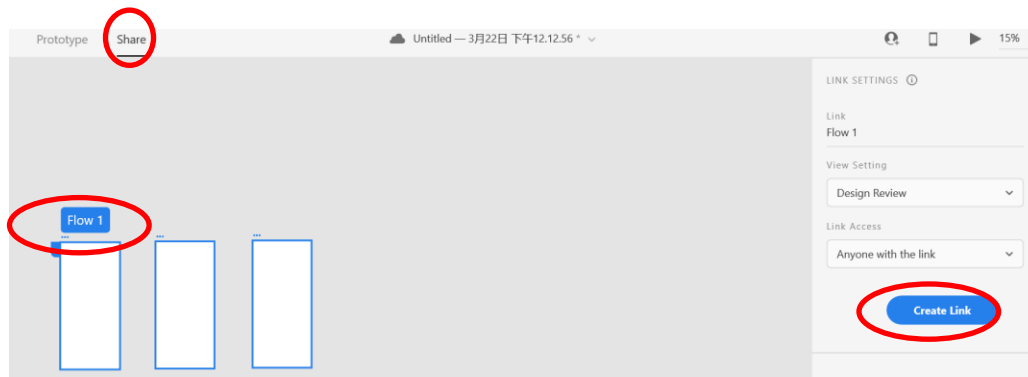

- Share your wireframe 1 with two flows

Click the circled area of the homepage of your mobile wireframes. You will see flow 1 appear

Click the circled area of the homepage of your mobile wireframes. You will see flow 1 appear

Click "Share" on the top. Click Flow 1. Then share the flow 1 link. Do not check "Require Password".

Click Flow 2. Then share the flow 2 link. Do not check "Require Password".

- Submit your Wireframe 1 link and the Adobe XD file to Reggienet. I check your link first. If it does not work, I can still go to your .xd file to check it.

Note:

If you are interested in how to make responsive design. Here is a tutorial for you https://www.youtube.com/watch?v=0SmVgcWfmmk
